DIVISIONAL DIPLOMA CEREMONIES INFORMATION

The Arts and Sciences Masters Diploma Reception will be held immediately following Commencement in the Great Hall of the Union Building. Recipients of Ph.D. degrees from Arts and Sciences and their guests are welcome.

The Engineering Masters Diploma Award Ceremony was held last evening.

The Arts and Sciences and Engineering Undergraduate Diploma Award Ceremony will be held at 2:30 p.m. this afternoon on the Keyser Quadrangle.

The School of Continuing Studies Undergraduate and Graduate Diploma Award Ceremony will be held at 7:30 p.m. this evening on the Keyser Quadrangle. Reception to follow.

The Paul H. Nitze School of Advanced International Studies Diploma Award Ceremony will be held at 3:00 p.m. this afternoon at the First Baptist Church of the City of Washington, 16th and "O" Streets, N.W., followed by a reception at the Nitze School.

The School of Hygiene and Public Health Diploma Award Ceremony was held yesterday afternoon.

The School of Medicine Diploma Award Ceremony will be held at Goucher College at 3:00 p.m. this afternoon.

The School of Nursing Diploma Award Ceremony will be held in the Turner Auditorium at the School of Medicine at 4:00 p.m. today.

The Peabody Conservatory's Diploma Award Ceremony will be held in the Miriam A. Friedberg Concert Hall at 8:00 p.m. this evening.

THE JOHNS HOPKINS SOCIETY OF SCHOLARS

The Johns Hopkins Society of Scholars was created on the recommendation of President Milton S. Eisenhower and approved by the University Board of Trustees on May 1, 1967. The society—the first of its kind in the nation—inducts former postdoctoral fellows and junior or visiting faculty who have gained marked distinction in their fields of physical, biological, medical, social, or engineering sciences, or the humanities, and for whom at least five years have elapsed since their Hopkins affiliation. The Committee of the Johns Hopkins Society of Scholars, whose members are equally distributed among the academic divisions, elects the scholars from the candidates nominated by the academic divisions having programs for postdoctoral fellows. The scholars are invested at the time of Commencement, Commemoration Day, or a similar occasion. They are presented with a diploma and with a medallion on a black and gold ribbon, to be worn with their academic costumes.

Today, we honor 16 new inductees, invested at a ceremony yesterday afternoon, who bring the society's membership to 297. They are:

Dr. Romesh C. Batra
Rolla, Missouri

Dr. Batra's research has embraced the areas of fluid mechanics, elasticity, viscoelasticity, penetration mechanics, and adiabatic shear banding. In each of the last six years, he has been honored by the University of Missouri with a Faculty Excellence Award in recognition of his superior performance in research, teaching, and service.

Dr. Myron F. Goodman
Los Angeles, California

A recognized authority on the biochemical basis of mutations, Dr. Goodman has developed a unique research program that has yielded original insights into the natural causes of errors in DNA replication. His models of error correction and prevention have provided a theoretical basis for an understanding of the molecular basis of genetic disease.

Dr. Morley D. Hollenberg
Calgary, Alberta, Canada

A leading figure in the field of peptide hormone research, Dr. Hollenberg's innovative and critical investigations of epidermal growth factor (urogastrone) and insulin have significantly advanced understanding of hormone-receptor interactions.

Dr. Edward Watson Hook
Charlottesville, Virginia

Dr. Hook's studies of the epidemiology, pathogenesis, and treatment of bacterial infections have advanced knowledge of the clinical manifestations of endocarditis and the mechanisms by which salmonella develop antibiotic resistance. His 21-year tenure as director of the Department of Medicine at the University of Virginia is among the longest on record in the United States.

Dr. Thomas S. Inui
Boston, Massachusetts

A leading example of the academic physician-scholar, Dr. Inui is devoted to the application of the principles of community medicine in his everyday clinical and scholarly work. Among the issues with which he has been most concerned are the effectiveness of health services, patient-physician communication, and preventive care in clinical practice.

Dr. Martin Hume Johnson
Cambridge, England

An outstanding teacher, writer, and experimentalist, Dr. Johnson has made major contributions to the understanding of early mammalian development, including that of humans. His research approach to a rational study of early human development had important practical consequences for in vitro fertilization.

Dr. Baruch A. Kipnis
Haifa, Israel

Combining theoretical studies of land use and metropolitan development with studies of rural settlement and industrial concentration, Dr. Kipnis has made major contributions to research on spatial aspects of human settlements. He is founder and head of the Haifa and Galilee Research Institute, which is conducting research on geographic aspects of northern Israel and adjacent regions.

Dr. Edward R. Laws Jr.
Charlottesville, Virginia

An expert in the management of pituitary tumors and gliomas, Dr. Laws' research has contributed significantly in the areas of neuro-oncology, histochemistry, cytochemistry, and experimental biology of brain tumors.

Dr. Gavril W. Pasternak
New York, New York

As one of the leading opiate basic researchers in the country, Dr. Pasternak's contributions have involved differentiating subtypes of opiate receptors that are differentially affected by drugs, leading to identification of agents that can provide analgesia with a lower incidence of side effects.

Dr. Timothy J. Pedley
Leeds, England

A leading authority in physiological fluid mechanics, Dr. Pedley has made numerous contributions to the dynamics of unsteady blood flow by bringing analytical and numerical techniques in fluid mechanics to bear on various physiological processes. His work has clarified many aspects of blood flow separation, instability and bifurcation.

Dr. Bernard Robaire
Montreal, Quebec, Canada

With research interests spanning basic studies of reproductive toxicology and fertility regulation, Dr. Robaire has made significant discoveries in the areas of regulation of the structure and function of the mammalian epididymis, the effects of toxic agents on fertility, and the regulation of the hypothalamo-pituitary-testicular axis in mammals.

Dr. Robert J. Ruben
New York, New York

A pioneer in the field of research on the development of the auditory system, Dr. Ruben is noted for ground-breaking studies on the organ culture of the mammalian inner ear and for important clinical contributions to the understanding of human communication as it relates to both hearing and speech.

Dr. George A. Silver
New Haven, Connecticut

As a leading figure in maternal and child health in the United States, Dr. Silver has served at virtually all levels of the health care system. He has been the source of provocative and stimulating ideas, questioning the basic tenets of the health care delivery system and providing innovative suggestions for new forms of organization and finance.

Dr. Jean Starobinski
Geneva, Switzerland

One of the most prominent scholars in the field of French studies today, Dr. Starobinski's books and essays on the literature and intellectual history of the 17th, 18th, and 19th centuries have earned him great stature and influence in the fields of French studies, literary criticism, and psychoanalytic criticism.

Dr. Thomas Earl Starzl
Pittsburgh, Pennsylvania

A pre-eminent clinician-scientist for the past several decades, Dr. Starzl has made major contributions in kidney transplantation and was a pioneer in liver transplantation. He was also a pioneer in cluster transplants, the transplanting of several organs simultaneously into a patient.

Dr. Juzer M. Vasi
Bombay, India

An internationally recognized expert in the growth of silicon dioxide and in concomitant defect states that limit or determine device performance, Dr. Vasi has made major contributions to the field of microelectronics, including an understanding of electric breakdown of submicron thin films and solution of major problems in the breakdown and instability of insulators.

As chief executive of one of the world's largest pharmaceutical and health product firms, you repeatedly have demonstrated that business and science, business and health care, and business and society can work hand-in-hand to tackle some of the most daunting health challenges that confront us today.

Your success in business alone would qualify you as a noteworthy figure of our time. Since 1972, when you were named chief executive officer of what is now Bristol-Myers Squibb Company, sales have risen from \$1.2 billion to more than \$11 billion.

But there is much more to consider. Under your guidance, the company moved into new areas that benefit the health of men, women, and children around the world. The company has emerged as a leader in fighting cancer, and its new therapies have made it possible for hundreds of thousands of cancer victims to live longer, richer lives. Thousands of children have benefited from specially developed formulas to counter inborn errors of metabolism. Pioneering programs in the neurosciences, nutrition, anti-infectious agents, and orthopedic devices evidence the contribution that dedicated private initiative can make to human advancement.

Not content with the impact of in-house research, you initiated a major commitment to the unrestricted funding of biomedical research elsewhere. By the end of last year, some \$40 million in company funds had been committed to more than 100 biomedical institutions around the world. In addition, many innovative medications developed by the company—Taxol and the anti-AIDS drug Videx, among others—are made available free of charge to those without the means to buy them.

Richard L. Gelb, for your concern and your commitment to the societal responsibility that epitomizes the most principled aspects of American business, The Johns Hopkins University confers upon you the degree of Doctor of Humane Letters, *honoris causa*.

During a literary career that now spans more than 70 years, you have educated us with the precision of your language, moved us with the angle of your vision, and inspired us with the curve of your bold and generous life. Last month, in presenting you for the Shelley Memorial Award of the Poetry Society of America, Nobel laureate Joseph Brodsky celebrated you as an enduring talent that “belongs in a constellation with Louise Bogan and Elizabeth Bishop.” Earlier, in citing you for the Lenore Marshall Prize, another fellow poet, William Jay Smith, reminded us that your poetry is “intimately related to distant truth,” stands apart from transient fashions, and shines with the “reticence and reverence” that we associate with the achievement of Marianne Moore.

You are admired equally for your poetry and your fiction, for the remarkable clarity with which you

record the world around you, human and inhuman, and for the uncommon courage with which you reveal to us our common mortality.

You began your career at the age of 11 with the publication of your first poem. Almost 60 years later, you published your first collection of short stories, which firmly established your reputation in that genre. Your prose is distinguished by the same exactness, energetic insight, and compassion that have long marked your poetry.

You served two terms from 1971 to 1973 as consultant in poetry to the Library of Congress, a post recently retitled national poet laureate. To this position, as many of your peers (in a profession not noted for its generosity) have testified, you brought an acute ear for the excellence of others, a shrewd critical intelligence, and an understanding heart. Early and late, you have been a teacher, mentor, and friend to many other writers, helping them to find their own way.

Like very few poets, you have succeeded in writing some of your most original, your most moving, and your most truthful work in the decades of your 70s and 80s. Arising from springs of wide experience, deep feeling, and keen perception, this work is a constant refreshment and a sure antidote to what you have warned us is the most dangerous thing in the world for the writer and the reader: habit.

Josephine Jacobsen, in gratitude for your radiant poetry, fiction, and criticism, which force us to brush aside the “anesthesia of habit,” The Johns Hopkins University confers upon you the degree of Doctor of Humane Letters, *honoris causa*.

You have dedicated your life to education: Jewish education, public higher education, the education of individuals. At 28, you were president of Baltimore Hebrew College; under your leadership for 40 years, that institution grew into a university. You have been called the “father of creative Jewish learning in Baltimore,” yet your devotion to education reached far beyond the Jewish community. For almost a quarter century, you served on the University of Maryland Board of Regents, which you led as chairman from 1970 until 1975.

You have been a religious leader in Baltimore for more than 60 years, helping establish three synagogues. But one of your favorite teachings has been that “study is more important than prayer, and good deeds are more important than both.” Your good deeds have left their mark not just on Maryland, but on the world. In 1946, Denmark awarded you the King Christian X Liberation Medal for your leadership in raising funds for relief of Danish Jews who escaped to Sweden during World War II. Since 1970, you have served as executive vice president of The Joseph Meyerhoff Fund, working to improve the quality of life in our city, state, and nation and in Israel. In that process, of course, I was given a rare opportunity to know you intimately—and to learn—continuing a relationship with our family that began with your arrival in Baltimore more than 60 years ago.

Yet teaching has always remained your first love. Today, at 90, you still find time for one-on-one conversations, meeting with eager students over lunch or in a rare free hour. You say you get more from these exchanges than your students do; you say teaching keeps you young. Perhaps so, but it is also your spirit, your refusal to accept the status quo and your determination to do battle over what is right that keeps you young and vital.

Louis Kaplan, for your devotion to lifelong learning and teaching, for your brilliant and tireless leadership, and for your efforts to make Baltimore and the world more humane places, The Johns Hopkins University confers upon you the degree of Doctor of Humane Letters, *honoris causa*.

For more than 20 years you have blessed audiences with your humor, your vision of the world and, perhaps most of all, your affection for your hometown, Baltimore. After you set out for Hollywood, your father, Irv, predicted you would be back working for him at his appliance store within a month. Fortunately for us, he misjudged your talent.

But he was right in the larger sense. Though you have won Emmies, Writers Guild and Golden Globe awards, and the Oscar for Best Director for the film *Rain Man*, you did come back home, time and again, through the rich tapestry of your memories. In what critics call your Baltimore Trilogy of *Avalon*, *Tin Men*, and the film that launched your directorial career, *Diner*, you lovingly recreated our past. And without over-sentimentalization or melodrama, you have brought audiences to our door stoops, revealing the values, hopes, desires and frustrations of ordinary people, the neighbors with whom you and your family grew up. You create characters we know, and you make their lives, and our memories, resonate.

But what most of us do not know about are your activities out from behind the camera. Along with your wife, Diana, also a Baltimorean, you participate actively in the world community. You lend your name and give your time and financial support to children's organizations, such as the Pediatric AIDS Foundation, and to environmental causes, such as The Rainforest Foundation. Your concern and involvement reaches back home, as you continue to contribute generously to local charities, you support the Orioles and you are working hard to return professional football to Baltimore.

Barry Levinson, for making us laugh, for helping us to remember, for working to improve the world in which you live and for being an outstanding ambassador of Baltimore and Maryland, The Johns Hopkins University confers upon you the honorary degree of Doctor of Humane Letters, *honoris causa*.

You are truly one of the founding fathers of the modern theory of finance. You have been a pioneer in illuminating and improving the behavior of financial markets by the use of rigorous economic analysis.

You and previous Nobel laureate Franco Modigliani revolutionized the subject of corporate finance in 1958 by deriving the celebrated MM propositions about the value of a firm. You showed that in a well-functioning capital market without tax or other distortions, the total value of a firm depends on the amount of riskiness of the future returns that it can be expected to generate, but not on the manner in which those returns are divided up among stockholders and bondholders. Your propositions were initially greeted with great skepticism and resistance, but after extended debate, they are now widely accepted and taught. They have become an integral part of the foundations of the modern theory of capital markets.

In your subsequent work, you have become an authority on many aspects of finance, from leverage to taxation to arbitrage to index futures. Your outstanding capacities have been recognized both in academia and in

the practical world. You were chosen by the Chicago Mercantile Exchange to head its Committee of Inquiry into the stock market decline of October 1987, and you served as president of the American Finance Association. Your doctoral dissertation adviser at Johns Hopkins was certainly correct when he wrote of you in 1953, “We forecast for him a very distinguished career.” That career was honored in 1990 when you were awarded the Nobel Memorial Prize in Economic Science.

Merton Miller, for pathbreaking work in the theory of finance and for constructive application of your deep practical wisdom about the role and function of financial markets, The Johns Hopkins University confers upon you the degree of Doctor of Humane Letters, *honoris causa*.

You are known among deans of American medical schools as the leader in medical education, for in your 15 years as dean of the Harvard Medical School, you have transformed medical education in the United States. You brought about this revolution by putting education first at Harvard, at a time when training young doctors often was a lower priority than promoting research or cutting costs for patient care. Your enthusiasm inspired your faculty to rededicate themselves to physician training, and your example stimulated other medical schools to examine their objectives and their training process.

It is fitting that you accomplished these advances while at Harvard, for Harvard University trained you and shaped you as a scientist and doctor more than 40 years ago. You have always been devoted to biomedical science and research, and you have made great strides in furthering our knowledge of the physiology of ion exchange across membranes. Yet early in your career, you also took on the role of teacher. In 1958, you joined the Washington School of Medicine, and you have been dedicated to education ever since.

At Harvard, you directed the “new pathway” for medical education, by integrating patient involvement and clinical experience with rigorous training in the basic sciences. You stressed the relevance of medical research to clinical problems by having medical students learn from both clinical scientists and basic scientists in small groups.

Daniel Tosteson, for your excellence as a medical scientist, for your innovative leadership in medical education, and for your dedication and humanity, The Johns Hopkins University confers upon you the degree of Doctor of Humane Letters, *honoris causa*.

in Presenting
Richard von Weizsäcker
for the Degree of Doctor of Humane Letters
May 24, 1993*

Having served as lord mayor of free Berlin when that city was still divided, you were elevated above the political fray in 1984 to serve as head of state of the German democracy. The Basic Law of the Federal Republic

bestows little power on the president, but you have enormously enhanced the influence and stature of your office by the integrity and moral force of your personality.

When the two German states so suddenly and unexpectedly became one, you recognized from the outset that unification would be neither easy nor painless. In word and deed, you have become a living symbol of your nation's unity, speaking out for fairness and equity during the difficult process of economic and social dislocation.

You condemn eruptions of hatred against foreigners and refugees. You condemn all attempts to resurrect fascist ideology and rhetoric. You will not allow your fellow Germans to forget the tragedy of the Nazi past. "Anyone who closes his eyes to the past," you have said, "is blind to the present. Whoever refuses to remember the inhumanity is prone to new risks of infection."

Richard von Weizsäcker, your voice as president has become the voice of Germany's conscience, appealing unfailingly to all that is best in the German people. In gratitude for your outstanding commitment to human freedom and your splendid leadership in the cause of human decency and civility, The Johns Hopkins University confers upon you the degree of Doctor of Humane Letters, *honoris causa*.

THE UNIVERSITY MACE

The University Mace carried by the Chief Marshal, Dr. Stephen F. Szabo, was first used at the 1954 Commemoration Day Exercises. Eight symbols are hand wrought in sterling silver on an ebony staff. The symbols represent our cultural development from ancient times, through the Middle Ages and the Renaissance, to the modern era.

THE PRESIDENTIAL INSIGNIA

University President William C. Richardson is wearing the Presidential Insignia signifying the authority vested in the President by the Board of Trustees. It is a chain of sterling silver links worn around the neck. Portraits of each of the eleven Johns Hopkins University Presidents are engraved on the faces of eleven of the links. On the reverse are engraved the names and dates of office of each President. Five blank links for future use are included. The University Seal completes the design.

ACADEMIC DRESS

The custom of wearing academic dress stems from the Middle Ages, when scholars were also clerics and wore the costume of their monastic order. The hood was originally a cowl attached to the gown, which could be slipped over the head for warmth. The cap was originally round, but has changed to the varieties that we see today.

The gown varies for the respective degrees. The Bachelor's gown is worn closed and can be distinguished by its long, pointed sleeves. The Master's gown is designed to be open with the arms worn through the slits in the elbows of the sleeves. The Doctor's gown, also worn open, has full, bell-shaped sleeves with three horizontal bars stitched across the upper arm. There is a velvet panel draped around the neck and stitched down the front edges. This velvet trimming may be either black or the same color as the velvet border of the hood.

The hood also varies for the respective degrees. The Bachelor's and Master's hoods are of the same design, pointed at the base. The Bachelor's hood is three feet long; the Master's hood is three and one half feet long. The Doctor's hood is four feet long, of fuller shape and rounded at the base.

The hood is bordered with velvet, the color of which indicates the field of study in which the bachelor's, master's, or doctoral degree was earned:

Dark blue—Philosophy

Light blue—Education

Green—Medicine

Salmon pink—Public Health

Orange—Engineering

Gold-yellow—Science

White—Arts and Letters

Pink—Music

Purple—Law

Apricot—Nursing

Tan—Business

The silk lining of the hood represents the institution which granted the degree. If more than one degree is held, the gown and hood of the higher or highest degree is worn. The Johns Hopkins University has adopted an alternative costume to be used by all holding Johns Hopkins doctoral degrees, both earned and honorary. The costume consists of a gold robe with front and side panels in sable velvet and a six-sided Dutch academic cap with gold sweatband and tassel. The linings seen in today's academic procession may include:

Black, old gold chevron—Johns Hopkins

Light blue, white chevron—Columbia

Dark blue—Yale

Blue with white chevron—Duke

Dark blue, two orange chevrons—Illinois

Light blue, two white chevrons—North Carolina

Old gold, maroon chevron—Minnesota

Old gold—Iowa

Gold, blue chevron—University of California at Berkeley

Gold—Virginia

Purple, gold chevron—Northwestern

Carnegie Tartan—Carnegie-Mellon

Purple—New York University

Bright red—Wisconsin

Plum, with scarlet—London

Maroon—Chicago

Crimson—Harvard

Carnelian, two white chevrons—Cornell

Cardinal—Stanford

Cardinal red and gray—Massachusetts Institute of Technology

Red, tri-Chevron in center—Heidelberg

Dandelion yellow—Michigan

Maize, azure blue chevron—Sorbonne

Yellow and white—Rochester

THE UNIVERSITY MOTTO

Veritas vos liberabit.
The truth shall make you free.
